

We are looking for a strong Python Developer with solid backend and data-handling experience and working familiarity with Artificial Intelligence (AI) and Machine Learning (ML) concepts. The ideal candidate is an excellent Python engineer who can collaborate with data scientists and AI engineers, integrate AI models into applications, and continuously grow their AI skillset. Deep AI expertise is not required; practical exposure and learning mindset are key.

Responsibilities

Design, develop, and maintain high-quality Python-based applications and services

Build and optimize RESTful APIs, microservices, and backend systems

Integrate AI/ML models into production systems for inference and automation

Work with data pipelines, preprocessing, and validation for AI-driven features

Collaborate with AI/ML engineers, data scientists, and cross-functional teams

Ensure code quality through unit testing, code reviews, and best practices

Improve performance, scalability, and reliability of applications

Participate in architecture and technical design discussions

Stay current with Python, backend, and AI technology trends

Qualifications

Core Python Skills

Strong proficiency in Python, including OOP concepts and data structures

Experience with Python frameworks such as Django, Flask, or FastAPI

Solid understanding of REST APIs and asynchronous processing

Experience working with relational and/or NoSQL databases (PostgreSQL, MySQL, MongoDB)

Familiarity with Linux systems, Git, and CI/CD pipelines

AI / ML Exposure (Working Knowledge)

Basic understanding of AI/ML concepts and model lifecycle

Hands-on experience with NumPy, Pandas, and scikit-learn

Exposure to TensorFlow or PyTorch at an integration or basic usage level

Experience consuming AI/ML models via APIs or SDKs
