

EDUCATION

University of Southern California, Marshall School of Business – Los Angeles, CA

Dec 2022

Master of Science in Business Analytics (STEM)- Merit Based Scholarship

MS Ramaiah Institute of Technology – Bengaluru, India

May 2018

Bachelor of Engineering

Honors: Scholarship for scoring 100/100 in mathematics, chemistry, physics as well as rank in Karnataka CET (Engineering rank = 710, Medical rank = 1239 out of approx. 145,000 students)

WORK EXPERIENCE

Reliance Partners – Chattanooga, Tennessee, United States

Senior Data Scientist

April 2025 – Present

- Maintained and enhanced production ML models - Smart Leads, Churn, Similar clients and Insurance recommendation systems
- Designed and implemented a RAG-based internal chatbot using 60+ Excel tabs of structured and unstructured data, with embeddings and a feedback loop to improve accuracy, and deployed it as a high-performance FastAPI service.
- Built an automated pipeline using web scraping and APIs to collect 400,000+ records twice a week, enabling tracking of client views
- Developed an automated Python pipeline to parse emails, click links in them, extract various data points, download Excel reports, and load them into SQL Server, reducing manual processing and improving efficiency.
- Engineered a python script using Selenium, Tesseract OCR, and OpenCV to download PDFs, extract text, crop signatures based on relative word positions, and compare them against labeled samples to identify the signer—cutting manual review time significantly

Data Scientist

March 2023 – March 2025

- Collaborated closely with the retention team to design and deploy a client retention ML model, saving at least \$2.2 million monthly
- Led the development of a ML model to enable new customer targeting by coordinating with the sales team, predicting the probability of client conversion in the insurance industry using 50 + tables and millions of records
- Developed, maintained, and supported numerous Power BI dashboards, seamlessly integrating relevant data via SQL Server, stored procedures, views, and ADF pipelines through continuous coordination with cross-functional teams
- Other major projects include understanding root cause for revenue loss and developing strategies surrounding that, predicting premium intervals across various quotes & performing POCs on Snowflake, Azure Synapse Analytics and Azure Databricks

AECOM – Savannah, Georgia, United States

June 2022 – Dec 2022

Data Science – Engineering Intern II

- Enhanced dredging project tracking by providing the US Army Corps of Engineers (USACE) with an improved dataset, updating two databases from 1990-2009. Achieved key project objectives 2 months ahead of schedule
- Delivered comprehensive training sessions on fraud analytics, marketing analytics, and optimization, empowering team members with varying levels of data science expertise. Also, streamlined daily activities in HR departments through automation using Python

Karnataka CNC Technology Pvt. Ltd. – Bengaluru, India

2019 – 2020

Manager

- Led production planning and reporting initiatives, utilizing interactive Tableau to track daily production activities. Also, oversaw a pilot project which focused on insight generation and data collection, resulting in cost reductions of \$20,000 within the plant

Bosch – Bengaluru, India

2018 – 2019

Data Analyst

- Reduced Camshaft defects by 6% by multi-wing data analysis using the 8D method; ensured BS-6 pump quality and supported Bosch's largest relocation by forecasting SAP product locations, training interns, and creating process guides with Agile methods

PROJECTS

Fraud Detection in Credit Card Transactions

Mar 2022 – May 2022

- Built real-time credit card fraud detection using supervised ML, reducing 1,310 features to 20 via filter/wrapper, tuned hyperparameters, & selected the best model from Logistic Regression, Random Forest, LightGBM, XGBoost, Neural Networks
- As a result, 62.6% frauds/risks could be eliminated by rejecting 3% of transactions and theoretically saved around \$1.27 million

Toxic comment Classification using NLP

Oct 2022 – Dec 2022

- Established a complete NLP pipeline; Performed pre-processing using regex, removed stop words and did lemmatization; selected features using count vectorizer, Tf-idf, GloVe & Word2Vec; compared scoring metrics across logistic regression, random forest, neural network architectures (RNN, LSTM). Produced a model with 82% precision, 56% recall and 58% F-1 score

SKILLS & INTERESTS

- Programs: SQL, Python, NoSQL (MongoDB, Neo4j), R programming, Excel, Tableau, Power BI, Azure Data Factory
- Modeling: Supervised (linear regression, logistic regression, Neural Nets, random forests, XG Boost, SVM), PCA, unsupervised (K-means clustering, Autoencoder), Time-series forecasting, NLP, ETL/ELT, Anomaly detection, Data Warehousing, A/B testing, Hadoop, Churn Analysis, Optimization, Recommendation systems, Exponential smoothing, SPSS, RNN, LSTM, Autoencoder
- Libraries: chi-square, Anova tests, Keras, TensorFlow, NLTK, spaCY, Tfidf, Word2vec, LDA/topic modeling, Google Analytics, Pandas, NumPy, Gurobi, sklearn, Scikit-learn, AWS, Azure, PySpark PyTorch, Databricks, PyCaret, ARIMA, MongoDB, Spark
