

RANJAN KUMAR RAY

Mobile: +91-7702917306

Email: kumarrkray1234@gmail.com

Professional Summary:

- 5.10 years of experience in java developments Role to analyze and develop enterprise applications.
- Proficient in application development using Agile methodology.
- Experienced in developing large Internet & Intranet related/ Database applications using J2SE, J2EE, Spring Framework, Spring Boot, Junit, REST and MySQL.
- Experienced in working in cloud environment & Microservices.
- Strong knowledge in Java design patterns like Singleton, Factory, Strategy etc.
- Extensively working in Eclipse, STS and IntelliJ Development Tools.
- Experience in using the tools like Log4J, Maven, tomcat.
- Experience AWS, Maven, Jenkins, Git, Docker, Kubernetes, Linux.
- Experience with AWS services like EC2, Route53, S3, VPC and RDS, Lambda, IAM, RDS, CDK, Step Function, CDK
- Experience in creating containers with Docker.
- Experience in AWS cloud, creating instances.
- Experience in developing and supporting both production and development environments.
- Good experience in working with a team together to deliver best outputs in given time frames.
- Configure the new servers in F5 load balancer. During production issues, identify the faulty servers and place them out of rotation from F5 Load Balancer VIP to avoid business impact
- I have experience in Java support and have worked as a Production Support Engineer, handling L1, L2, and L3 support levels, as well as in a DevOps Engineer role.
- *Provided 24x7 on call support in production environment on rotation basis.*
- **I am an immediate joiner.**

Profile Experience:

Organization	Designation	From	To
SS&C Technologies	Sr. Software Engineer	Sep 2023	Till
Knack System & Services PVT LTD.	Associate Consultant	Sep 2021	Sep 2023
Zensar Technologies Limited	Software Engineer	Jan 2021	Sep 2021
Vengai Software System Pvt. Ltd	Associate Software engineer	Aug 2019	Jan 2021

Educational Details:

- B. TECH EEE in 2017 From BVC ENGG College.

Certification:

- Certified Azure-900 Fundamentals.
- AWS Certified Solutions Architect Associate.
- Certified GCP Professional cloud Architect.

Technical Skills:

- Platforms: Windows, Linux (Ubuntu)
- Languages: Java
- UI Technologies: HTML, CSS, JavaScript, Angular-17, React
- Database Software: MySQL, Oracle, PostgreSQL
- NoSQL Database: MongoDB
- JSE Technologies: JDBC
- JEETechnologies: Servlets, JSP
- Frameworks: Spring MVC, Spring Boot, Microservices
- ORM tool: Hibernate/JPA
- IDE/Tools: Eclipse, STS, VS Code,
- Code Coverage Tool: SonarQube
- Web Servers: Tomcat, WebLogic, J boss
- Source Code Management Tool: Git, Bitbucket
- Build Tool: Maven, Gradle
- Logging Tool: Log4J, Splunk, Sumo Logic
- Project Management Tool: Jira
- API Documentation Tool: Swagger
- Project Management Tool: Agile Scrum
- Configuration Management Tools: Chef, Ansible
- Monitoring Tool: Prometheus, Grafana, Datadog, NAGIOS
- Automation Tools: Jenkins (CI/CD) Server, Argo CD
- Cloud Technology: AWS, GCP, Azure-900, Azure DevOps
- Containerization Software: Docker, Kubernetes
- Infrastructure as Code: Terraform
- Messaging queue: Kafka, JMS
- Scripting Language: Shell Scripting

Professional Experience:**PROJECT#4:**

Project Name: Automated Work Distributor

Duration: Sep 2023 To Till.

Team Size: 6

- **Project Description:** AWD Customer Service provides customized, call-tracking solutions that include standard call-center functionality. Using AWD Customer Service, you can resolve and log issues more efficiently because you will have real-time access to claims system data. In addition, AWD Customer Service can interface with many of your existing software applications, providing a seamless transition between products and further automating your infrastructure. AWD Customer Service allows you to categorize callers, who are referred to as "contacts." The categories include Member, Provider, Group and Other. Each category allows you to retrieve pertinent information about the caller from the system, while simultaneously logging detailed information about the current call.

Responsibilities:

- Designed and developed the application in Microservices Architecture.
- Developed the code as per the client requirements.
- Created Angular module for front end.
- Developer Spring Boot with Microservices architecture.
- Created docker compose file and pushed in to docker desktop.
- Created EC2 instance and used S3buckets for deployments.
- Created Jenkins pipeline.
- Integrate Rest service clients.
- Responsible for writing test cases for java functionalities using Junit.
- Worked extensively on analyzing the existing application and project requirements.
- Provide oversight to the technical teams delivering the support and maintenance services for Applications and Infrastructure.

Environment: Java-17, Spring Boot 3.4, Rest API, Microservices, Kafka, Angular-17, Jenkins, AWS, Postgres, Git, Maven, IntelliJ, Docker, Kubernetes.

PROJECT#3:

Project Name: National Cardiac Audit Program

Duration: Sep 2021 To Sep 2023.

Team Size: 8

- **Project Description:** This project is used to maintain the details of Doctor, Patient, and Insurance of the Patient. This software is so designed as to ease the Manually workload as well Synchronize the Operation Also. The main feature includes Registration of patient Online and Appoint with Related Doctor Is also provides all Medicare and Healthcare to Patient to Reduce or Complete Solution of their Disease. It allows Patient to See Their Medical Information Online to being assure how they are Treating by their doctor and Hospital Staff. It's Also Provides Online Appointment for Doctor from List of Disease Expert Doctor.

Responsibilities:

- Developed Spring Boot with spring cloud in a microservice architecture.
- Written angular and java code in spring boot for the features assigned.
- Development of business logic using spring boot and java 8.
- Created EC2 instance and used S3 buckets for deployments.
- Usedspring features like dependency injection.
- Integrate Rest service clients (Jersey).
- Developed the user interface using Angular Framework and JavaScript to simplify the complexities of the application.
- Responsible for writing test cases for java functionalities using Junit.
- Use Version controls like GIT.
- Implement the persistence layer using Hibernate to interactwith the Oracle database with Hibernate Framework ORM.

Environment: Java-8, Maven, IntelliJ, Git, Jira, MySQL, SpringBoot2.7, Microservices, Splunk, Junit, Kafka, AWS, Docker, Jenkins

PROJECT#2:

Project Name: Auto Payments integration

Duration: Jan 2021 To Sep 2021.

Team size: 8

Project Description: My current project is Auto Payment integration. Our Client O2. O2 is the one of the become system provider in UK. Generally O2 customers will do their bill payments using online or store with this approach O2 has been facing some problems like payments not cleared on due payments, manual work. To avoid this O2 is providing APIC application. Using This APIC application the auto payments will be done without user interaction and based on bill date payments will be done without any late charges. To Do the first customer should enroll the O2 with their card details. Based on credit score eligibility auto payments will be performed.

Responsibilities:

- Developed Spring Boot with spring cloud in a microservice architecture.
- Used spring features like dependency injection.
- Written angular and java code in spring boot for the features assigned.
- Written REST APIs in the Controller class, Service, DAO classes and Repository interfaces for the features assigned.
- Design and develop applications using design patterns and J2EE design.
- Integrate Rest service clients (Jersey).
- Extensive use of JavaScript, JSP.
- Developed the design patterns like singleton, factory pattern.
- Responsible for writing test cases for java functionalities using JUnit test engine.
- Use Version controls like GIT.

Environment: Java, Spring Boot, MySQL, Eclipse, Git, Maven, Tomcat, Rest, Log4j, JPA

PROJECT#1:

Project Name: Meta Corp Warehousing

Duration: Aug 2019 To Jan 2021

Team size: 10

Project Description:

- "Meta Corp Warehousing" is a Warehouse Application works for logistics and Supply chain management. It Makes easy for item supply from manufacture.
- Company to end customers with customized software. Easy inbound and outbound modules are provided in application with user friendly UI. Supports web service calls for client application integration.
- Meta Corp Warehousing is Supply chain domain application for warehouse, with basic inbound and outbound operations with central controlling software and database. Reports, Contracts, GST, Invoice also supported with easy UI and navigation.
- Users (Vendor and Customer) may have items connected to orders for purchase and sale process and easy billing process provided for orders.

Responsibilities:

- Developed the Code as per the requirements.
- Developed spring with JPA as persistence.

- Designed and developed the presentation layer which includes Angular framework.
- Involved in developing user interfaces by using JSP, HTML and CSS.
- Used spring features like dependency injection.
- Tested restful services using Postman.
- Developed spring, Hibernate Configuration files and updated configuration files as per the requirement. Interconnectivity of Database through Hibernate
- Developed web-service (restful) business method to exchange inter-application information.
- Developed design patterns like singleton, factory pattern.
- Use Version controls like GIT.

Environment: Java, Spring MVC, Web services, Rest, Tomcat, Eclipse IDE, MySQL.

Personal Profile:

Name: Ranjan Kumar Ray

Gender: Male

Date of Birth :06- Jan,

1996 Nationality: Indian
