Objective

Dedicated and detail-oriented Python Developer with 5.3 years of professional IT experience, specializing in backend development, data processing, and automation. Seeking to leverage strong problem-solving skills and experience with Django, Docker, and data manipulation libraries to contribute to innovative projects in a dynamic team.

Professional Summary

5.3 years of experience in software development using Python Proficient in building scalable backend systems with Django and utilizing Docker for containerization. Basic understanding of front-end development technologies including HTML and CSS. Committed, goal-oriented, and eager to learn new technologies and development methodologies.

Skills

Python || Django || SQL

Education [2014-2018]

Swami Ramananda Tirtha Institute of Science & Technology
Bachelor of Technology (B.Tech) – Electronics and Communication Engineering (ECE)

Work Experience [Quadrant Technologies] [Python Developer]

Q-Migrator

Client: Quadrant Technologies (2021– Present)

Description:

Q-Migrator is a proprietary database migration tool developed by Quadrant that enables seamless schema and data transformation across heterogeneous database systems—such as migrating from Oracle to PostgreSQL.

Key Contributions:

- Developed data migration tools using Python, SQL, Pandas, and NumPy to sync Oracle and PostgreSQL.
- Containerized the application using Docker for uniform development and deployment across environments.

QBook

Description: A Django-based web platform supporting Q-Migrator by enabling developers to create, test, and manage custom migration engines

Responsibilities:

- Designed and implemented new features using Django to streamline engine creation.
- Contributed to CI/CD practices and improved turnaround time for schema migration engine development.

Client: eBay (2024 – Present)

- Description: Q-Migrator is a proprietary Quadrant tool designed for seamless database migration from Oracle to PostgreSQL, ensuring 100% schema conversion across all supported object types.
- Engineered data migration utilities in Python, incorporating SQL for efficient data handling between Oracle and PostgreSQL.
- Contributed to the design and implementation of a Django-based web application to streamline and automate the creation and management of migration engines for database projects.
- Led the development of new features that simplified workflow for users, improving ease of use for migration management.
- Collaborated closely with cross-functional teams to ensure project alignment with business goals and technical standards.

Client:: Apollo Hospitals (2022–2024):

- Description: Q-Migrator served as a central platform for database transformation projects, automating conversion of Oracle database schemas and data to PostgreSQL to support expanding enterprise needs.
- Built and maintained Python and SQL-based migration frameworks optimized with Pandas and NumPy for accurate cross-database synchronization.

Client:: Fms (2021–2022):

- Description: At FMS, Q-Migrator focused on transitioning SQL Server database systems to PostgreSQL while ensuring full schema and data fidelity.
- Built and maintained Python automation scripts that are sustainable and reusable, enhancing migration efficiency and reducing manual effort.
